(a)
hazard integral Q_i
compartment half-time (min)
shallow stops
deep stops
(b)
Q_i(deep) − Q_i(shallow)
compartment half-time (min)
deep stops lower
deep stops higher
(c)
hazard ratio, deep / shallow
β_c = 0.31
hazard weighting exponent β
model ratio
observed ratio
95% interval
critical β_c
(d)
hazard weight $g_i(\beta)$
β=-1
β=0
β=1
β=2
compartment half-time (min)
