
(a)
weighting exponent β
path parameter θ (0 shallow, 1 deep stops)
log10 hazard / shallow stops
NEDU deep
best point on the path
NEDU deep stops
(b)
stop depth (fsw)
weighting exponent β
best stop time found (min)
(c)
hazard relative to shallow stops
weighting exponent β
best distribution found
spread over three starts
NEDU shallow stops
NEDU deep stops
βc of the NEDU pair
(d)
deep-stop skew (bar min)
weighting exponent β
best distribution found
NEDU shallow stops
NEDU deep stops
βc of the NEDU pair
